Team 6 Test and Evaluation Plan

ML Model evaluation

        We plan to evaluate our machine learning models on the metrics of Accuracy, Recall, and F1 score. Additional metrics may be evaluated and taken into account, but these three will be the highest priority and most prominently reported in reports and presentations.

        The objective for our models is Accuracy and Recall scores at or above 85%.

Code Testing

        The code for the front and back ends will be tested via both unit tests and user tests, both based on the requirements set at the start of the fall semester.
